Voro

AI-Powered Desktop Automation

You say the word. Voro takes control of your desktop and does it exactly like you do.

What is Voro?

Voro is an AI agent that can see, understand, and control your computer through natural language. Simply describe what you want done, and Voro executes it across any application - no coding, no configuration, no brittle scripts.

How It Works

1	2	3	4
Voro Hears	**Voro Sees**	**Voro Decides**	**Voro Acts**
Tell Voro what you want in plain English	Voro reads your screen	Plans the best path to complete your task	Takes control and runs the steps

Example Commands

"Open Finder, go to Downloads, and move all PDFs into the Invoices folder."

"Find the latest invoice from Hooli Corp in my email, and if over $10k, create a Jira ticket."

"Open Outlook and send a mail to the team about tomorrow's meeting."

Why Voro Wins

Feature	Traditional Automation	Voro
Requires Code	Yes	No
Works on Any App	Configured only	Any app
Handles UI Changes	Breaks	Adapts
Setup Time	Hours/Days	Minutes

Market Opportunity

- **$44.74B+** Intelligent Automation Market by 2028
- **94%** of workers do repetitive tasks daily
- **1.8hrs/day** spent searching for info

The Ask: $500K Pre-Seed Round • 40% Engineering • 30% AI Infrastructure • 20% Go-to-Market • 10% Operations
